Alice

Alice in Wonderland is a great book, but very long. It would be useful if we had an easy way to read through it with Python. Lucky for us, such a way exists – we will use regular expressions.

For this exercise you must learn the tutorial of the regex module in Python by yourself – go to the tutorial on http://users-cs.au.dk/kmt/AP2012/RegularExpressions.html and answer the qustions in each section – hand in a file containing the code you used to answer each question.

Try your code on a small part of the book, http://users-cs.au.dk/kmt/AP2012/alice.txt , and afterwards on the whole book, to make sure it works, http://www.umich.edu/~umfandsf/other/ebooks/alice30.txt .

Good luck!
